**Exam** : **70-744**

**Title** : **Securing Windows Server  
2016**

**Version** : **DEMO**

1.Note: The question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory forest named contoso.com. All servers run Windows Server 2016. The forest contains 2,000 client computers that run Windows 10. All client computers are deployed from a customized Windows image.

You need to deploy 10 Privileged Access Workstations (PAWs). The solution must ensure that administrators can access several client applications used by all users.

Solution: You deploy 10 physical computers and configure them as PAWs. You deploy 10 additional computers and configure them by using the customized Windows image.

Does this meet the goal?

A. Yes

B. No

**Answer: A**

2.Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory forest named contoso.com. All servers run Windows Server 2016. The forest contains 2,000 client computers that run Windows 10. All client computers are deployed from a customized Windows image.

You need to deploy 10 Privileged Access Workstations (PAWs). The solution must ensure that administrators can access several client applications used by all users.

Solution: You deploy 10 physical computers and configure each will as a virtualization host. You deploy the operating system on each host by using the customized Windows image. On each host you create a guest virtual machine and configure the virtual machine as a PAW.

Does this meet the goal?

A. Yes

B. No

**Answer: B**

3.Note: This question is part of a series of questions that present the same scenario. Each question in the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory forest named contoso.com. All servers run Windows Server 2016. The forest contains 2,000 client computers that run Windows 10. All client computers are deployed from a customized Windows image.

You need to deploy 10 Privileged Access Workstations (PAWs). The solution must ensure that

administrators can access several client applications used by all users.

Solution: You deploy one physical computer and configure it as a Hyper-V host that runs Windows Server 2016. You create 10 virtual machines and configure each one as a PAW.

Does this meet the goal?

A. Yes

B. No

**Answer: A**

4.Note: This question is part of a series of questions that present the same scenario. Each question In the series contains a unique solution that might meet the stated goals. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question In this section, you will NOT be able to return to It. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory domain named contoso.com. The domain contains a computer named Computer1 that runs Windows 10. Computer1 connects to a home network and a corporate network.

The corporate network uses the 172.16.0.0/24 address space internally.

Computer1 runs an application named App1 that listens to port 8080.

You need to prevent connections to App1 when Computer1 is connected to the home network.

Solution: From Group Policy Management, You create an Applocker rule.

A. Yes

B. No

**Answer: B**

Explanation:

AppLocker does not filter incoming network traffic, what you actually need is Windows Firewall Inbound Rule on the Private profile.

5.Note: This question It part of a series of questions that present the same scenario. Each question In the series contains a unique solution that might meet the stated goats. Some question sets might have more than one correct solution, while others might not have a correct solution.

After you answer a question in this section, you will NOT be able to return to It. As a result, these questions will not appear in the review screen.

Your network contains an Active Directory domain named contoso.com. The domain contains a computer named Computer1 that runs Windows 10. Computer1 connects to a home network and a corporate network.

The corporate network uses the 17216.0.0/24 address space internally.

Computer1 runs an application named App1 that listens to port 8080.

You need to prevent connections to App1 when Computer1 is connected to the home network.

Solution: From Group Policy Management you create a software restriction policy.

Does this meet the goal?

A. Yes

B. No

**Answer: B**

Explanation:

Software Restriction Policy does not filter incoming network traffic, what you actually need is Windows Firewall Inbound Rule on the Private profile
