

Exam : C1000-121

**Title : IBM Datacap V9.1.8
Development**

Version : DEMO

1.A Datacap system successfully receives uploaded documents, but no further processing occurs. OCR, classification, and workflow execution do not start.

- A. Taskmaster is not dispatching jobs to Rulerunner execution layer
- B. Rulerunner is running but not polling execution queue
- C. Workflow engine is bypassing ingestion stage due to configuration
- D. OCR engine is not initialized during system startup

Answer: A

2.Documents are visible in the repository after upload, but remain static without entering any processing pipeline.

- A. Document storage is complete but execution pipeline is not triggered
- B. Classification engine is active but not receiving input stream
- C. Rulerunner is processing but workflow is paused
- D. Taskmaster queue is overloaded causing ingestion delay

Answer: A

3.A company processes multiple document types, but all documents are incorrectly treated as the same type in production.

- A. Classification logic is bypassed due to runtime routing configuration
- B. Fingerprint model is not applied in production execution profile
- C. OCR preprocessing is failing before classification stage
- D. Workflow engine is skipping classification step during execution

Answer: B

4.Different invoice formats must be automatically detected and separated before extraction.

- A. Zonal extraction with classification-driven segmentation is required
- B. Manual indexing must be applied after OCR processing
- C. Rulerunner routing must replace classification layer
- D. Static mapping must be used across all document types

Answer: A

5.OCR output is visible in logs, but extracted fields are not populated in DCO.

- A. Ruleset mapping is not applied to OCR output stream
- B. Classification engine is blocking field population stage
- C. Workflow engine is not forwarding extracted data
- D. OCR engine is not producing structured output

Answer: A
