

Exam : C1000-161

**Title : IBM Instana V1.0.243
Administration**

Version : DEMO

1.What is an essential consideration when deploying IBM Instana in a hybrid cloud environment?

- A. Ensuring compatibility with only IBM cloud services
- B. Neglecting private cloud resources as they are inherently secure
- C. Monitoring across both on-premises and cloud environments
- D. Focusing exclusively on the public cloud components

Answer: C

2.What is a common practice when configuring authentication to enhance security?

- A. Using simple passwords for ease of memory
- B. Enabling multi-factor authentication (MFA)
- C. Allowing unlimited login attempts
- D. Using the same password for multiple users

Answer: B

3.Which considerations are important when scheduling maintenance windows in Instana?

- A. Specifying the impacted services or applications
- B. Defining the maintenance window duration
- C. Automatically disabling all alerts for the system
- D. Notifying team members about the maintenance schedule

Answer: ABD

4.When upgrading the Instana Backend On-Prem, what best practices should be followed?

- A. Sequentially upgrading components based on their dependencies
- B. Isolating the upgrade environment from production
- C. Direct upgrade to the latest version from any older version
- D. Ensuring that there is a rollback plan in case the upgrade fails

Answer: ABD

5.How can the Instana Query Language be utilized to filter data effectively?

- A. By applying it to create customized dashboards
- B. To generate specific alerts based on complex criteria
- C. To restrict user access to sensitive data
- D. To automate incident response workflows

Answer: AB
